Professional Summary

Early-career agricultural researcher with experience in data collection, analysis, and modern farming practices. Skilled in Python, MATLAB, GenStat, and machine learning for building predictive models to improve agricultural production. Recognized for strong leadership, collaboration, organization, and time management skills, with a proven ability to work effectively in groups. Committed to advancing data-driven solutions for sustainable agriculture and food security.

Education

Ciheim Bari/Polytechnic University of Bari Valenzano Bari-Italy
MSc. Sustainable Water and Land Management in Agricultural Ecosystems October 2026 – June 2027

- Research Focus: UAV and remote sensing-based precision irrigation, integrating thermal imagery, vegetation indices, evapotranspiration, soil-moisture sensing, and machine learning to improve crop-water management and water-use efficiency.
- The use of GIS/remote sensing tools, machine learning, and other digital tools to improve agricultural production and environmental resource management

University of Cape Coast Cape Coast, Ghana
B.Sc. in Agriculture August 2019 – August 2025

- Research: Effect of Drip Irrigation and Plastic Mulch on Tomato Growth, Yield, and Water Use Efficiency.
- Top 5% of the graduating class.

Professional Experience

Pascoe's Field Ghana
Senior Agronomist / General Farm Manager February 2026 – Present

- Increased crop productivity by 25–35% by designing and implementing climate-smart production systems across greenhouse and open-field operations.
- Cut chemical pesticide use by 20–40% while improving crop health by implementing integrated pest and disease management (IPM) systems.
- Enhanced farm decision-making efficiency by 30% by leading field trials and applying data analytics tools (AquaCrop, Python, Excel).
- Improved partnership and contract execution efficiency by 30% through drafting and reviewing business proposals and agreements.
- Secured funding with a 40–60% success rate by leading and contributing to grant and investment applications.
- Boosted stakeholder and investor engagement outcomes by 30% by representing the organization at presentations, pitch events, and meetings.

Elibeth Farms Kasa, Ghana
Farm Manager and Founder November 2024 – Present

- Directed nursery management and integrated pest/disease control, reducing seedling mortality by 25% and improving early crop survival rates, which boosted overall farm productivity.
- Developed and executed farm business plans, drafting 5+ Memoranda of Understanding (MOUs) and contracts with partner businesses, leading to 3 long-term collaborations that strengthened financial sustainability.
- Led capacity-building workshops and training sessions for 50+ local community farmers, increasing adoption of climate-smart practices by over 60% and enhancing resilience against drought and pests.
- Pioneered precision agriculture techniques such as sensor-based soil monitoring and precision irrigation, achieving 30% reduction in water usage while improving yield consistency.
- Represented the Farms in national and regional business pitch competitions, securing two funding opportunities worth \$9,000+ to scale sustainable farming initiatives.

Neils Henrik Norgaard Dairy Farm Farup, Denmark
Farm Management Intern May 2023 – November 2024

- Utilized SmartDairy technology to track milk yield, feed intake, and cow activity patterns, enabling early identification of 95% of health anomalies and reducing milk production losses by 15%.
- Monitored breeding cycles using sensor-based apps, improving accuracy of heat detection by 30% and increasing successful breeding outcomes by 20%.

- Identified, treated, and prevented livestock diseases (mastitis, influenza, milk fever), contributing to a 25% reduction in disease incidence and lowering veterinary costs by 10%.
- Conducted laboratory analysis of 200+ milk samples for protein, fat content, and disease markers, providing data-driven recommendations that improved milk quality compliance by 90%.
- Managed the feeding, hydration, and treatment of 50+ calves, achieving a 95% survival rate and supporting steady herd expansion.

Fountain Foods

Research Assistant

Cape Coast, Ghana

May 2021 – August 2021

- Monitored pepper farm health, diagnosing diseases, applying preventive measures, and implementing effective weed control, reducing crop damage by 20%.
- Applied food processing techniques to transform cassava into flour, plantain into flour, and pepper into powder, enhancing value-added product development.
- Conducted a mini-project on cassava waste utilization, developing a low-cost carbohydrate substitute for poultry and pig feed, lowering feed dependency on maize by 30%.
- Collaborated with colleagues on farm and food innovations, strengthening teamwork and applied research skills in agricultural sustainability.
- Gained hands-on experience at the farm-to-food interface, linking crop management with food technology to improve efficiency and reduce waste.

Academic Service, Leadership, & Volunteering

- 2024 – Farm Guide on Cocoa Sustainability: Ghana Cocoa Sustainability Program
- 2024 – Farm Visit and Trainer: University of Cape Coast
- 2021 – Vice President, Compassion International Ghana
- 2021 – Peer Mentor, Compassion International Ghana
- 2020 – Pandemic Educator, Agriculture Department: University of Cape Coast

Research Experience

Undergraduate Thesis

- *Effect of Drip Irrigation and Plastic Mulch on Tomato Growth, Yield, and Water Use Efficiency* – Investigated irrigation and mulching methods in tomato production, improving water conservation efficiency by 20% without yield loss.

Academic Projects

- **Vegetable Production Project** – Tested Cobra 34 and Mona F1 tomato varieties under drip irrigation and plastic mulch systems, identifying varietal responses that improved yield consistency by 15%.
- **Production of Yam and Sweet Potato** – Evaluated crop performance under organic, inorganic, and mixed soil treatments; findings generated soil fertility recommendations for smallholder farmers.
- **Field Crops Production** – Assessed maize-cowpea intercropping systems, reducing chemical fertilizer use by 20% while sustaining crop yields.
- **Cassava Waste Feed Processing** – Processed cassava waste into low-cost poultry and pig feed, substituting maize by 30% and reducing overall feed costs for smallholder farmers.

Presentations

- Quansah, P. (2025, August). *Effect of Drip Irrigation and Plastic Mulch on Tomato Growth, Yield, and Water Use Efficiency*. Presented thesis at the University of Cape Coast Agriculture Department seminar.
- Quansah, P. (2024, March). *Elibeth Farms integrated farming approach and practices*. Presented our business proposal to the Tony Elemule Foundation to secure \$5,000 grant to support and expand our ongoing farm projects.

Teaching Experience

Mozano Senior High School, Ghana Education Service

Class Instructor

Gomoa Tarkwa, Ghana

February 2020 – January 2021

- Taught General Agriculture, Animal Husbandry, Mathematics, and Integrated Science to 50+ high school students, improving average test performance by 25% during the program.
- Designed and delivered tailored lesson plans that addressed both STEM subjects and agricultural sciences, leading to 80% of students reporting improved understanding of applied science concepts.
- Introduced practical examples from agriculture and livestock management to make Animal Husbandry and General Agriculture lessons more relatable, boosting class participation and retention.
- Mentored and supported students individually through after-class sessions, helping struggling learners raise their

exam scores and succeed in national examinations.

- Partnered with community organizers to expand outreach, increasing program enrollment by 40% compared to the previous years.

Professional Development & Conferences

- **Summer Research Programme**, University of Cape Coast, Ghana (Jun 2025): Odonata morphological adaptations to environment gradient: integrated student research in the field, museum, and laboratory.
- **Sustainable Agriculture**, University of Cape Coast, Ghana (Jun 2025): Building capacity for sustainable farming practices.
- **Agribusiness Value Chain**, African Food Changemakers (May 2025): Explored collaboration between farmers and processors to strengthen agribusiness.
- **Leadership in Agribusiness**, African Food Changemakers (Jun 2025): Led discussions on youth participation in agribusiness.
- **Innovative Technology**, African Food Changemakers (May 2025): Explored innovative technologies to ease agribusiness operations.
- **Climate Change and Climate Smart Approaches**, African Food Changemakers (Jan 2025): Strategies for running climate-resilient agribusiness models.
- **Water Harvesting Systems**, University of Cape Coast, Ghana (Jun 2025): Engineering solutions for sustainable water management.
- **BRACE Program**, African Food Changemakers (Dec 2024 – May 2025): Building resilience against climate and environmental shocks.

Awards, Honors, & Fellowship

- **2025 – Tony Elemule Foundation Fellowship (\$5,000)**, Tony Elemule Foundation – Awarded to support an integrated farming system approach, designed to improve sustainable agriculture and biodiversity and also train local farmers.
- **2025 – Ghana Climate University Network (GCUN) Project Fellowship (\$4,500)**, Ghana Climate University Network – Rearing of snails using eco-friendly methods and a climate-smart approach to produce an alternative protein source for consumers and diabetic patients.
- **2024 – Grace Station Foundation Scholarship Award** – Scholarship award for undergraduate tuition as a promising young agricultural scientist.
- **2024 – Dean's Award for Academic Excellence for the 2022/2023 Academic Year** – Awarded for outstanding performance in the agricultural sciences.

Non-Degree Education & Certificates

- 2025 – Alison Online Education Platform: Diploma in Soil and Water Conservation Engineering
- 2025 – Alison Online Education Platform: Digital Literacy – IT Basics, Internet & Productivity
- 2025 – Alison Online Education Platform: Sustainable Agriculture Theory, Cultivating a Greener Future
- 2025 – African Food Changemakers: Building Resilience Against Climate and Environmental Shocks (BRACE) Program
- 2024 – Neils Henrik Norgaard Farms in Denmark: Bixter training Scandinavian Program

Highlighted Skills

Soft Skills: Strong communication skills, leadership and team coordination, analytical thinking and problem-solving, collaboration and interpersonal effectiveness, relationship development and networking.

Technical Skills: Proficiency in data analysis tools (Python, MATLAB, GenStat, AQUACROP, CROPWAT), Microsoft 365, Machine Learning algorithms – logistic regression, KNN algorithm, SVM and Decision Trees, and K-means Clustering.

Professional Member Association

- International Association of Student in Agriculture and related Sciences (IAAS)
- Africa Food Changemakers
- Tony Elumelu Foundation Fellowship
